AMIT LEARNING

< Main >

It contains the main content of the page and its unique, means that cannot be two or more main, only one. And it should not contain repeated content.

< article >

It is not something you can see like the <div>, although you can manipulate it with the CSS, the main use of it is to make story that have tittle and then description, blogs,..... .

<details>

One of my favorites as Amit student, it looks like the drop-down menu with a lot of changes ofcourse, you can write a head and the details of it then you can click on it to show the details or hide it.

< summary >

It works with the < details > tag to make the heading visible to the details, the <summary> should be the first child of the <details> tag.

< figcaption >

It puts caption for the figure,like in the word when you place a figure you put a caption below it to descripe it or to give it a number, ex figure 1.

< figure >

I don't get it, what is its purpose, the only point I get that we can use the <figcaption> tag on it to give it caption. Put we can do this in a various way without need this tag. The description of this tag is that this element is related to the main flow, its position is independent of the main flow, and if removed it should not affect the flow of the document.
